SKILLS

Languages: Python, JavaScript/TypeScript, Java, SQL
Frontend: React, React Native, TypeScript, HTML/CSS
Backend: Python (Flask, FastAPI, Django), Java (Springboot), Node.js, REST APIs
Databases: PostgreSQL, MySQL, MongoDB
DevOps & Tools: Docker, Git, CI/CD, cloud (AWS/Azure)
Engineering Practices: Unit testing, integration testing, debugging, code reviews, documentation
Product & Soft Skills: Ownership, product-minded, self-starting, humble, collaborative, curious
Languages: English (fluent), French (A2* improving)

EDUCATION

EPITA
MSc – Software Engineering
Expected 2027 | Paris, France.

Novena University
BSc – Computer Science
2023 | Delta State, Nigeria.

PROJECTS

TideFlow Mobile [ongoing…]
- Building a full-stack boat booking platform (Django + FastAPI) featuring offline-capable QR ticket validation and secure payments, serving 100+ daily passengers

Saffron Gardens Web & Mobile [ongoing]
- Building an event management system with Java (backend) + OTP email verification and websockets, responsive web (React) and mobile (React Native / TypeScript) frontend, that Involves understanding user needs, defining features, and iterating based on feedback.

Personalized Wellness Planner [EPITA]
- Built platform using node.js, Java (Spring boot), React, MongoDB/MySQL with habit tracking, calendar sync, and analytics dashboards.

Twitter Clone [EPITA]
- Built the backend of a Twitter-inspired application using JavaScript, focusing on API development, authentication, and database design.

Efe Akporowhe

SOFTWARE ENGINEER

Software Engineering student from EPITA with experience building things end to end. I like building products, not just writing code. I've shipped features to production that real users depend on, from a banking client's backend to working on a boat booking platform that would serve 100+ passengers a day. I work in Python, Java and JavaScript, I'm comfortable across frontend and backend, and I care about ownership, speed, and code that holds up. I'm curious about what makes a product work for people, and I'm looking for a team where engineers make the decisions they build, and work with other experienced engineers.

EXPERIENCE

JUNIOR BACKEND DEVELOPER,
NEPTUNE SOFTWARE GROUP. | MAR 2024 – AUG 2024 [LAGOS, NIGERIA]
- Worked directly with a banking client to understand requirements, translate needs into technical features, and ship them to production.
- Designed and developed backend features using Java (Spring Boot) , and MySQL for Equiweb (cheque book management system for a banking client), covering the full development.
- Participated in technical choices, feature rollouts, and production deployments, used Docker for containerization and Git for version control (branching, pull requests, merge workflows).
- Wrote unit tests, performed debugging, and participated in code reviews, participated in Agile workflows (sprints, stand-ups, Jira).

FULLSTACK APPRENTICE DEVELOPER,
GREENWOOD TECHNOLOGY | JUN 2022 – MAY 2023
[LAGOS, NIGERIA]
- Built full-stack features using React/TypeScript frontend + Python/Node.js backend services with REST API integration.
- Collaborated with cross-functional teams to deliver features with real user impact.
- Wrote automated tests, clean documentation, and ensured code quality.
- Worked in a fast-paced, agile environment with weekly releases, launched features fast, gathered feedback, and iterated quickly

IT APPRENTICE,
ACCELERATED NETWORKS | FEB 2021 – MAY 2022
[LAGOS, NIGERIA]
- Configured and maintained routers, switches, wireless, and resolved hardware/ software/ connectivity issues for end users.
- Deployed, monitored, and troubleshot cloud-based services while handling system setup, software installation, and maintenance.
- Documented network configurations, technical procedures, and support activities to enable team knowledge sharing and reliable IT operations.
